Anshuman Rupesh Agrawal

AI/ML & full-stack developer | Python, .NET and MERN

anshumanagrawal89@gmail.com | Shegaon, Maharashtra, India
GitHub: Anshuman8705 | LinkedIn | Portfolio & project evidence

PROFILE

Third-year B.E. Information Technology student at SSGMCE Shegaon and an AI/ML Developer Intern at One Smarter, Inc. Work spans machine learning research prototypes, account-based web applications and hardware prototyping, with an emphasis on practical implementation and honest evaluation.

EXPERIENCE

AI/ML Developer Intern

One Smarter, Inc. · Ohio, remote | Aug 2026 – Present

Healthcare data automation: transforming EDI transaction data into structured formats and generating reports. Proprietary implementation remains private.

Chairperson, Robotics and Automation Society

SSGMCE Shegaon | Jul 2026 – Present

Also on the organising team for ICICGR 2026, the IEEE International Conference on Innovations in Communication, Geoscience and Robotics, coordinating technical sessions and hybrid presentations.

AI/ML Intern

IEEE EMBS Pune Chapter | 1–30 Jun 2026

Collaborative model development, evaluation and application work for DermAI Monitor under Dr. Ankita Tidake. Developed the research prototype with Tanushri Khawale.

MERN Stack Development Intern

Webstack Academy, Bangalore | 3 Sep–20 Nov 2025

Built Homely Hub end to end across an SDLC-structured cycle, from foundational HTML, CSS, JavaScript and React through to a deployed full-stack application.

TECHNICAL SKILLS

Machine learning: TensorFlow, Keras, scikit-learn, transfer learning, focal loss, Grad-CAM, model evaluation, computer vision

Generative AI: OpenAI API, prompt engineering

Languages: Python, C#, JavaScript, Java, C, SQL

Web and software: ASP.NET Core MVC, Entity Framework Core, React, Node.js, Express, Flask, REST APIs

Data: MongoDB, MySQL, SQLite, pandas, NumPy, Matplotlib, Chart.js

Tools: Git, GitHub, Linux, AWS fundamentals, Streamlit, Visual Studio, Google Colab, Fusion 360

EDUCATION

B.E. Information Technology | Shri Sant Gajanan Maharaj College of Engineering, Shegaon
September 2024–July 2028 (expected). CGPA 8.57 across the first three semesters.

SELECTED PROJECTS

DermAI Monitor

Machine learning | Source code | Case study

A research prototype for seven-class skin-lesion classification, combining an EfficientNetB3 model, Grad-CAM visualisations and a Streamlit application for reviewing results.

I co-developed DermAI Monitor with Tanushri Khawale, with both of us contributing equally to the project. Our combined work brought together model development, evaluation and the supporting application.

Project-reported results: 68.97% accuracy, 0.9143 macro ROC-AUC, 0.5426 macro F1. Research use only—not for clinical decisions. The documented low-confidence fallback is a known safety limitation.

Expense & Budget Management

Full-stack / .NET | Source code | Case study

An ASP.NET Core MVC application for recording income and expenses, setting monthly category budgets, and exploring spending through dashboards and reports.

I co-developed the Expense & Budget Management System with Rahul Paghrut, sharing the project work equally. Our combined work delivered the application's account management, transaction tracking, budgeting and reporting features.

Controller/service/data separation, EF Core with SQLite, account-scoped queries and decimal-based calculations. The repository includes HTTP smoke-test instructions; no current pass count is claimed.

ANSHUVO

Full-stack / commerce | Source code | Case study | Live demo

A React and Express shopping application with accounts, guest and account carts, inventory, reviews, order management and an administrator area. Payments are simulated.

React, Express, SQLite and Tailwind CSS. Demo payments only; no real goods, charges or shipments.

Homely Hub

Full-stack / MERN | Source code | Case study

A full-stack property-rental platform for tenants and owners, with authentication, searchable listings, image uploads and an administrator dashboard.

CERTIFICATES & TRAINING

CS50's Introduction to Programming with Python — CS50
Course completion | 2026 | View document

Skin Classification Using Deep Learning — IEEE EMBS Pune Chapter / IEEE Pune Section
Internship completion | 1–30 June 2026 | View document

Full Stack Web Development in MERN — Webstack Academy
Internship completion | 3 Sep–20 Nov 2025 | View document

AWS Academy Graduate – Cloud Foundations — AWS Academy
Training completion | 2026 | View document

Getting Started with Linux Fundamentals — Red Hat
Course attendance | 2 April 2026 | View document

More credentials: iBase AI/ML training, NxtWave workshop, Pursuit 2026 participation and TCS Tech Day appreciation. Original documents are on the portfolio.

HARDWARE & LEADERSHIP

Eight SSGMCE Digital Fablab learning modules; member since March 2025 and mentor since January 2026. Hardware work includes an ESP8266 ultrasonic monitor, Raspberry Pi IR detector and ESP32 prototyping. State-level softball; district-level cricket and chess.
